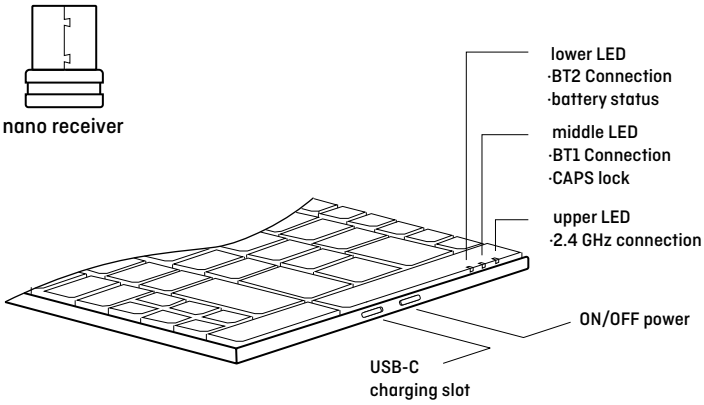
Setup - Solo-X2 wireless keyboard



System Requirements

Windows: recommended Windows8.0 and later
MacOS: recommended MacOS10.10 and later
Android: recommended Android4.3 and later

How to set up the keyboard

1.On the right side of the keyboard, switch the ON/OFF button to turn ON.
2.Insert the USB dongle provided into one of the PC's USB ports. The keyboard features plug-n-play software, so there is no additional action required.

Bluetooth connection:

1.Press FN + BT1 or FN + BT2 simultaneously to change to / activate the desired Bluetooth channel.
2.Press FN + BT1 or FN + BT2 simultaneously for at least 3 seconds until the respective LED starts flashing (on the right edge of the keyboard) indicating the Bluetooth pairing process for the desired channel.
3.Open the Bluetooth settings on your computer, search for the keyboard, and double-click the 2.4G+Bluetooth keyboard icon to pair.
4.You may use now your Bluetooth keyboard after connecting it succesfully to your computer.

2.4GHz connection:

1.Insert the USB dongle (provided) into one of the PC's USB ports. The keyboard features plug-n-play software, so there is no additional action required.
2.Press FN + 2.4 GHz button to activate the 2.4 GHz channel to connect to the USB dongle previously inserted into your computer.
3.To start the forced pairing method (re-pair keyboard and computer), please:
a. Remove the USB dongle if the keyboard was already in use.
b. Press simultaneously ESC + K.
c. Plug in the USB dongle into the computer again.
